	Method Argum	nent Name	Argument Value	Argument info	Method info
			CONSTRUCTOR - Obje	ect creation and assignment, first s	tep
g=	gramm('x'	x variable	1D array/cellstr of length N, Matrix of size (N,M) , (N,1) cell of 1D arrays	
g(ind_row,ind_col)=		اجوا	y variable	1D array of length N, Matrix of size (N,M), (N,1) cell of 1D arrays	
			label text	1D array of length N, Matrix of size (N,M), (N,1) cell of 1D arrays 1D array/cellstr of length N	
		color'	color grouping/continuous variable lightness grouping variable	1D array/cellstr of length N 1D array/cellstr of length N	Constructor for the class. Must be called first and result assigned to a variable
		_	linestyle grouping variable	1D array/cellstr of length N	Use to provide the data to be plotted
			marker grouping variable	1D array/cellstr of length N	
		'size'	size grouping variable	1D array/cellstr of length N	
		'group'	subgrouping variable	1D array/cellstr of length N	
		'subset'	selection variable	1D Logical array of length N	
		SUBPLO	TS/FACETING AND MUL	TIPLE FIGURES – Method calls, ord	ler indifferent
g.	<pre>facet_grid(</pre>		row grouping variable	1D array/cellstr of length N	
g(ind_row,ind_col).		'scale'	column grouping variable 'fixed'	1D array/cellstr of length N Same x and y limits on all subplots	
		Scare	'free_x'	Same y limits on all subplots, same x limits within columns	
			'free y'	Same x limits on all subplots, same y limits within rows	
			'free'	Same x limits within columns, same y limits within rows	
			'independent'	Independent limits on each plot	Use to provide data that will determine separation between subblots rows and columns. First argument provided will
		'space'	'fixed'	Same x and y axe size on all subplots	separate along rows, second will separate along columns
			'free_x'	Axis width proportional to x limits (requires 'scale', 'free_x' or	
			_	'free') Axis height proportional to y limits (requires 'scale' 'free y' or	
			'free_y'	Axis height proportional to y limits (requires 'scale', 'free_y' or 'free')	
			'free'	Axis width and height proportional to x and y limits (requires	
		orgo ticles		'scale', 'free' Do we override defaults and force ticks on all subplots	
		orce_ticks'	true/false column grouping variable	Do we override defaults and force ticks on all subplots 1D array/cellstr of length N	
	facet_wrap('ncols'		After how many columns do we wrap and create a new row	Use to provide data that will determine separation between
		'scale'		Same as argument in gramm facet_grid()	subblots columns, with a wrapping: a new row of subplots created when ncols is reached
	' fo		true/false	Do we override defaults and force ticks on all subplots	C. COLICO WHICH HOUR IS IEDUNEU
	fig(figure grouping variable	1D array/cellstr of length N	Use to provide data that will determine separation between
	9(B			figures
				ONS – geom_ method calls, order in	
	geom_point('dodge' 'alpha'		Set the alpha of points (0:fully transparent, 1: solid; no export)	Represent raw data as points (supports color, lightness, m size)
				How much are the points jittered in horizontal direction (in data	
	<pre>geom_jitter(</pre>	'width'	0.2	units)	
		'height'	0	How much are the points jittered in vertical direction (in data	Represent raw data as jittered points, useful when lots of
				units)	overlapping points, e.g. with discrete values (supports cold lightness, marker, size)
		'dodge'	0.5	When using multiple colors, use to dodge graphical elements between colors with the same x value	
		'alpha'	1	Set the alpha of points (0:fully transparent, 1: solid; no export)	
	11 /	Lanton	0.5	When using multiple colors, use to dodge graphical elements	Depresent row data with lines (supports solar lightness m
	geom_line('dodge'	0.5	between colors with the same x value	Represent raw data with lines (supports color, lightness, m size). If x and y are 1D arrays, all points within a group will
		'alpha'		Set the alpha of lines (0:fully transparent, 1: solid; no export)	connected !
	geom_raster('geom'	'point' 'line'	raster elements are points raster elements are lines	Represents raw x data as a raster plot
	geom_bar('width'	0.6	Provide to set the width of errorbars	
				When using multiple colors, use to dodge graphical elements	
		'dodge'	0.8	between colors with the same x value	
		'stacked'	true/false	Se to true to have bars placed at the same x stacked	
	<pre>geom_interval(</pre>	'geom'	'area'	Same 'geom' as in stat_summary()	
		'width'	0.6	Provide to set the width of bars and errorbars	Represent intervals provided 'ymin' and 'ymax' data (error area)
				When using multiple colors, use to dodge graphical elements	
		'dodge'	U • 1	between colors with the same x value	
	geom_label('dodge'	0	When using multiple colors, use to dodge graphical elements

	Argument Name	Argument Value	Argument info	Method info
	'dodge'	0.7	When using multiple colors, use to dodge graphical elements between colors with the same x value	
stat_smooth('method'	'eilers'	Smoother described in Eilers 2003 (default, fast)	
		'smoothingspline'	uses fit() from the curve fitting toolbox	
	'lambda'	'moving' 'lowess' 'sgolay'	uses smooth() from the curve fitting toolbox	Represents smoothed Y data with confidence interval.
	'npoints'		Smoothing parameter, depends on method, see documentation Number of points over which the smooth is evaluated	
	'geom'		Same geom as in gramm stat_summary()	
stat_glm('distribution'	'normal'	Same argument as fitglm()	
		•••		
	'geom'	•••	Same geom as in gramm stat_summary()	Fits and displays generalized linear models to the data.
	'fullrange'	true/false	Do we display the fit over the whole x axis, or just on the range of the value used for the fit	
	'disp_fit'	true/false	Do we display the fitted equations (with pvals stars)	
stat_fit('fun'	<pre>@(param1,param2,x)x.^param1+param2</pre>	Anonymous function with parameters to fit as first arguments and	
	'Start Doint'	[param1_start param2_start]	x as last argument Array with starting values of parameters	
		'observation'	95% bounds on a new observation (see option of predint())	
	тисорс	'functional'	95% bounds for the fitted function	Fits and displays a provided custom function to the data
			Do we display the fit over the whole x axis, or just on the range	The and displays a provided sustem function to the data
	'fullrange'	true/false	of the value used for the fit	
	'disp_fit'	true/false	Do we display the fitted equations	
	'geom'	•••	Same geom as in gramm stat_summary()	
stat_bin('nbins'		Number of bins	
	'edges'	-20 : 0.5 : 20	Edges ovf bins (overrides 'nbins') Results as dodged bars	
	geom	'line'	Results connected by a line	
		'overlaid_bar'	Results as overlaid bars (use transparency)	
		'stacked_bars'	Results as stacked bars	
		'stairs'	Results as stair line	
	'normalization'	'point' 'count'	Results as points	
	normarrzacion	count	Same as 'Normalization' argument of histcounts()	
	'fill'	'face'	_	
		'edge'		
		'all'		
	'width'	'transparent' 0.6	Provide to specify width of bars	
	'dodge'		Provide to specify dodging between elements	
stat_cornerhist('location'		x (or y) location of the inset axis on the unity line of the parent	
	'aspect'	0.3	Aspect ratio (y/x) of the inset axis	Display an histogram of the x-y difference in an inset axis
	'edges'	•••	Same options as stat_bin(). 'specifying edges is recommended, stacked_bar geom unsupported	
stat_density('bandwidth'		Same argument as ksdensity()	
	'function'	'pdf'		
	!learnal!	'normal'	Same argument as ksdensity()	
	kernei	normal	Same argument as ksdensity()	
	'npoints'		How many points are used to plot the density	
	'extra_x'	10	Extend the x value range over which the density is evaluated	
stat_bin2d(<pre>[n_xbins n_ybins] {x_edges_array, y_edges_array}</pre>		
	'geom'	'image'		
		'contour'		
stat_ellipse('type'	'95percentile'	Fit ellipse that contains 95% of the points (assuming bivariate normal)	
			normal)	
		'ci'	Fit ellipse that contains 95% of the bootstrapped xy means	
	'geom'	'ci' 'area'	Fit ellipse that contains 95% of the bootstrapped xy means Plot the ellipse as a shaded area with outline	
	'geom'			
	'geom' patch_opts	'area' 'line'	Plot the ellipse as a shaded area with outline Just plot the outline of the ellipse	
stat_qq(patch_opts	'area' 'line'	Plot the ellipse as a shaded area with outline	Quantile-quantile plot
